The Marten habitat suitability index ranges from 0 (unsuitable) to 1 (highly suitable). This data is classified into None (0), Low (> 0 to .25), Low to Medium (.25 to .50), Medium to High (.50 to .75) and High (.75 to 1). The data displayed is based on vegetation, slope, aspect and other derived environmental data from the U.S.D.A. Forest Service, Tongass National Forest ECOTEAM project.
